

SNOWSTRAP BRACKETS

Hook Type

Snowstrap brackets help prevent distortion and collapse of spouting, due to the weight of snow build up. Hook type snowstrap brackets have been designed by Calder Stewart Roofing, as a fast and easy to install snowstrap.

Each snow strap bracket consists of a heavy duty galvanised hoop iron end hook and a .55mm pre-painted steel fixing strap.

Calder Stewart Roofing recommends the use of snowstrap brackets, in addition to spouting brackets, in snow prone areas. After heavy snowfalls it is advisable for the owner to remove excess snow from the

roof above spoutings.

INSTALLATION

To install a snowstrap bracket, the hook end is simply clipped to the front edge of the spouting and the strap is then nailed through the crests of the profiled roof cladding, to the bottom purlin. Refer to details above.

Recommended maximum spacing is 600mm.

ORDERING

When ordering, please specify

1. Spouting profile - Bevelline, Quad, or OG
2. Strap colour - Calder Stewart standard colour
